1984/85 Annual Report

MGS

To His Honour, The Lieutenant Governor of the Province of Ontario

May it please Your Honour,

It is my privilege to present the Annual Report of the Ministry of Government Services for the fiscal year ending March 31, 1985.

As the ministry so closely involved with the working environment of the public service, all of our activities are intricately linked with the well-being and vitality of the public service as a whole. Ministry staff are constantly looking at ways and means to enhance customer service, improve productivity and increase efficiency. Nowhere is this more evident than in the pivotal role the ministry is playing in the significant gains being made across the government in the use of information technology.

Even in the short time it has been my pleasure to serve as the Minister of Government Services, I have been impressed with the attitude and initiatives of ministry staff in meeting these objectives. This dedication is revealed in the pages of this annual report and in the daily conduct of the people who make our search for excellence a reality.

The coming year holds much promise, as we strive to achieve even greater efficiencies and gains in productivity and customer service delivery. We will also be concentrating our efforts on ensuring that government, both in its provision of services to the public and the securing of them from the business community, is open, fair and accessible.

I am sure that next year's annual report will reflect this continuing commitment in view of the quality of the staff who have made it possible to meet our goals, and in many cases, to exceed them.

Respectfully submitted,

ELINOR CAPLAN
Minister

To The Honourable Elinor Caplan Minister of Government Services

Dear Minister:

I have the honor to submit the 1984-85 annual report of the Ministry of Government Services.

In its pages are documented the wide variety of services we provide to enable the Government of Ontario to deliver its programs and services.

Three themes emerge: quality, innovation and productivity.

Quality is more than just a desirable goal. It is an imperative. In recent years, all ministries and all civil service managers have been given the same tough message: do more with less – and do it better.

This message led us to examine ourselves. How were we serving our clients – the ministries and agencies of the province and the public at large? The answers pointed to a need for changes, some of which have already been happening within MGS.

What we are doing is as simple as this: business as usual, but with better service, better consultation and better follow-up. The key is partnership relationships.

Innovation means seeking and implementing new ways to make government business operations function more efficiently. It means new technology and new management techniques. We have made progress in this area, most notably in the

fields of computers, telecommunications, office environment, customer service and human resources management.

Productivity is the measure of an organization's success in raising output without incurring major expense to achieve it. To some extent it is tied to innovation, for operational capability is enhanced by the introduction of modern technologies and management techniques.

But, as this report shows, MGS also recognizes the powerful correlation between productivity and other factors of the work environment – human factors such as the comfort of office furniture, the quality of lighting, heating and ventilation, and personnel practices that give employees greater opportunities for career development.

Summed up, these factors spell the physical and mental well-being of those in the government workplace. They are equally important to the government's well-being.

This was the year that MGS started work on a human resources project that will affect all ministries and agencies of the Ontario government. The system will put government employee information on one central computer system. The implications for human resource management and planning and for individual career planning are profound.

In the physical realm, this report reflects the size of our largest and most pervasive service – accommodation. MGS has an immense real estate responsibility, being at one and the same time both the biggest landlord and the biggest tenant group in Ontario. It owns about 9,000 buildings and 3,500 properties throughout the province valued at more than \$5 billion.

This year the ministry has taken a more assertive approach to the management of land and buildings, and a cross-ministry approach to the examination of accommodation requirements.

There are many facets to MGS operations which are reported in detail in the following pages. I believe the annual report reflects the discharge of our responsibilities in an effective manner.

For this, I express appreciation to our staff, who, individually and collectively, bring vitality to the provision of public works and support services within the Ontario government.

Respectfully submitted,

GLENN R. THOMPSON
Deputy Minister

Highlights

The Government of Ontario is a major player in the social and economic life of the province, employing more than 80,000 of its citizens and owning \$5 billion worth of land, buildings and equipment.

Assisting ministries and agencies to create and maintain a work environment conducive to government productivity while maintaining the value and efficiency of physical plant is the role of the Ministry of Government Services.

It's a role with many dimensions. MGS staff work in everything from building design to stationery supply, mail delivery to pension benefits, parking lots to computer systems, food catering to job training, telephone networks to office air quality. They are the "working environment" people, filling and wrapping the package that is the public service workplace.

During the year reviewed in this report, the ministry focused strongly on the correlation between work environment and productivity.

A new direction was set in office design with emphasis on flexible space, equipment automation, adaptable furniture, improved ventilation and high energy conservation standards.

At the same time MGS made great strides in developing human resources, applying new technology, streamlining administrative procedures and improving program delivery for the ultimate benefit of clients: provincial ministries, agencies, boards and commissions and the general public.

Human development was served by the launch of CHRIS (Corporate Human Resource Information System), a three-year, \$5 million project to replace the government's integrated payroll, benefits and attendance recording systems. When CHRIS is in place, ministries will have instant, one-stop access to a comprehensive package of employee information. It will make personnel planning much easier and give employees greater opportunities for career development.

The ministry also undertook in 1984-85 a major review of the quality of its customer services. Findings led the ministry to set out to build a greater spirit of partnership, asking clients to involve MGS in every stage of a project from early planning through to implementation.

Computer and telecommunications usage by the government continued to advance

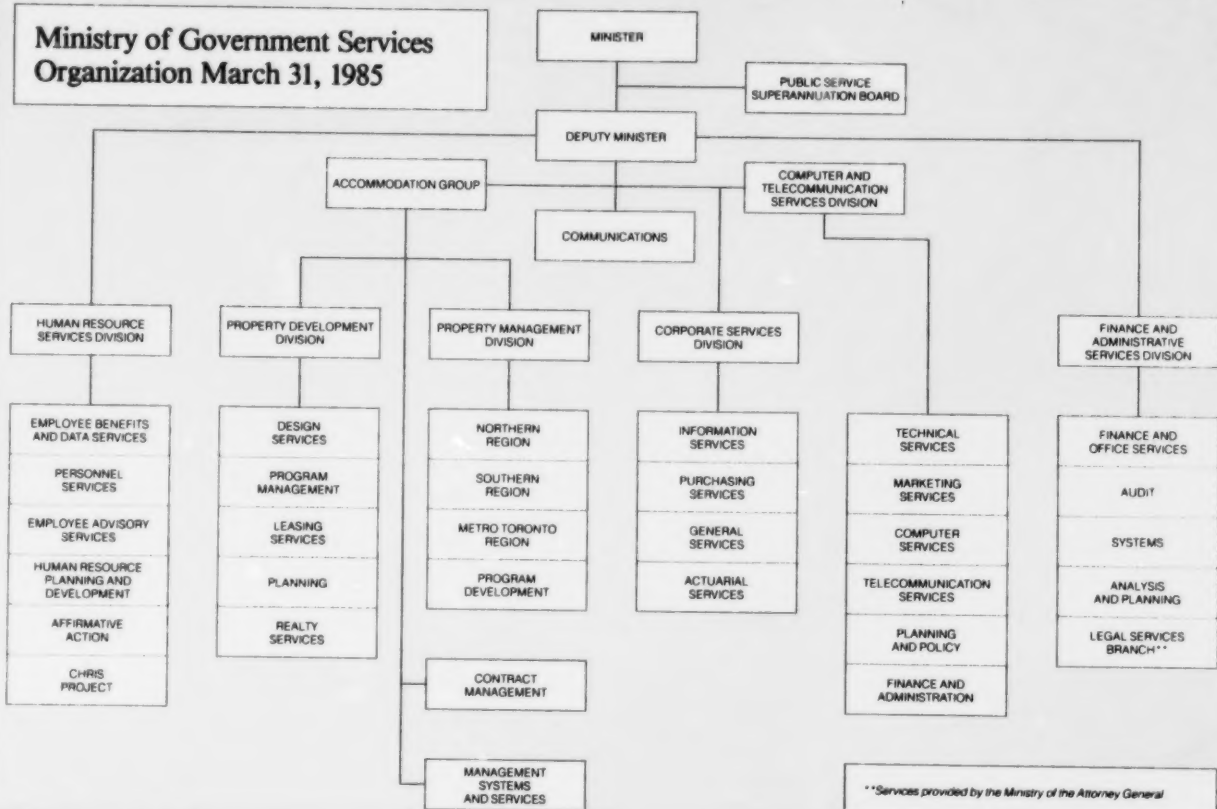

dramatically. The number of terminals linked to the ministry's three main computer centres increased 25 per cent to 5,200. Computer work volume rose by eight per cent while the cost to clients increased by only four per cent. Audio and video teleconferencing grew in popularity and plans were laid for major improvements to the government telephone system.

Pension services broadened with implementation of a new benefits plan for provincial judges and a supplementary pension plan for members of the Ontario Provincial Police. Amendments were made to let part-time and seasonal government employees become contributors to the Public Service Superannuation Fund as well as receive health and group insurance benefits.

In real estate, the ministry disposed of urban-area holdings valued at more than \$20 million in an accelerated sales drive called for in the 1984 provincial budget.

And in the administrative realm, a highlight was the formation of a ministry audit committee that's believed unique in the Ontario public service because it includes executives from another ministry and the private sector.

* A number of programs operate in a charge back mode e.g. Computer and Telecommunication Services Division has gross expenditures in excess of \$80 million.

Accommodation Group

Accommodation Group, representing the largest segment of the ministry's resources, plans, develops, and manages the government's accommodation and real property.

It consists of the Property Development and Property Management Divisions, and Contract Management Branch. Corporate administrative and financial services are provided by the Management Systems and Services Section. The section includes the Accommodation Management Information System which produces detailed information on buildings and property owned and leased by the government.

The Accommodation Group was responsible for programs totalling just under \$240 million: \$225 million for the accommodation program and just over \$14 million for the real property program.

In response to federal and provincial job creation initiatives, over 8,280 regular and short-term jobs were created through accommodation initiatives.

A major new undertaking within the Accommodation Group is a Land Management Program designed to extract maximum financial benefit from the government's large real estate inventory. Ways being considered include reinvestment of revenue from disposal of surplus or under-used land.

Contract Management Branch

The branch evaluates tenders, awards and pays contracts, supervises on-site construction and reviews and settles contractual claims. During the year it had under construction 44 major projects with a value of \$133 million. Building of the Ottawa courthouse and registry office continued toward an occupation deadline of spring 1986.

The ministry's revised tendering system continued to work well. Arranged in conjunction with the Ontario General Contractors Association and the Ontario Council of Bid Depositories, it involves accepting tenders in more than one location by a specific closing time, then opening them publicly in one location.

The economic climate in the construction industry continued to be reflected in the number of lien claims registered against contractors on ministry projects. During the year there were 473 such liens, which protect the interests of wage earners, suppliers and sub-contractors. The branch continued to settle most of these without recourse to litigation since the ministry retained the amounts of claims in trust for distribution.

Similarly, the ministry's contract document for use on construction projects, introduced in 1983, has been accepted by architectural and construction associations. It provides a high standard of contractual relationship between the construction industry and the ministry.

The branch helped other ministries with contract documentation and tender-calling on Expo '86, Ontario Place, Elgin Theatre and Rice Lake Fish Culture Station. It also provided advice and assistance to Minaki Lodge Resort Limited on dealing with contract close-out and claims.

Property Development Division

The Property Development Division provides the major professional and technical support services to the Accommodation Group. It is made up of five distinct organizational units with some 400 staff. The division provides program and project leadership, accommodation analysis, design and leasing services and real estate expertise to support government programs.

The division focused its efforts on developing accommodation policy, increasing privatization of service delivery, improving understanding of client needs, developing computer-aided design capabilities and improving local service delivery.

Planning Branch

This branch plans for the management of the government's real estate assets. It allocates accommodation space and prepares options for the future use of land and buildings.

A highlight of the year was completing MetroPlan, a project started in 1983-84 to sort out complex space requirements in the Metropolitan Toronto area. This provided a continuous process for reviewing and meeting accommodation needs of government ministries and agencies.

The net effect of the lease cost avoidance achieved by MetroPlan Short Term Action was estimated to be \$6-7 million. In addition, there were other real gains in client productivity, consolidation of facilities and overall space reductions which resulted from the plan's implementation.

More efficient office space management was encouraged through the branch's Cost Avoidance Program, which funds space reductions and cost effective alternatives. During the year 10 projects were implemented at an estimated cost of \$1.06 million. Although payback is required in three years or less, the projected return on this initial investment is 2.3-to-1.

To gain a greater understanding of client needs and opportunities for consolidation of real estate assets in the field, the branch conducted local accommodation reviews in Brampton, Peterborough, Hamilton, London and Thunder Bay. Findings are used to develop accommodation action plans. Characterization studies were also conducted in specific areas of accommodation, including leases and institutions, to assist policy development.

Program Management Branch

This branch is the ministry's prime point of liaison with client ministries. It provides planning, budgeting and scheduling control as well as overall accommodation project and program supervision.

The branch co-ordinates the work of other branches on a variety of activities including studies and consultations. It makes sure accommodation projects conform to the Environmental Assessment Act. And it does capital expenditure analysis for project decisions.

A major change in branch organization in 1984-85 put responsibility for all accommodation requirements for each client ministry under the control of a single project executive, to allow better response to the needs of the client.

The branch continued to expand the use of microcomputer technology to provide service to other branches and district offices. Also expanded to include participation by district offices was the Replacement and Refurbishment Program which was started in the previous year to bring the condition of aging government buildings up to acceptable standards.

Design Services Branch

The Design Services Branch provides architectural, engineering and office and interior design services to the ministry. It also does consulting for client ministries and gives technical advice to outside organizations on such questions as improving building access for disabled people.

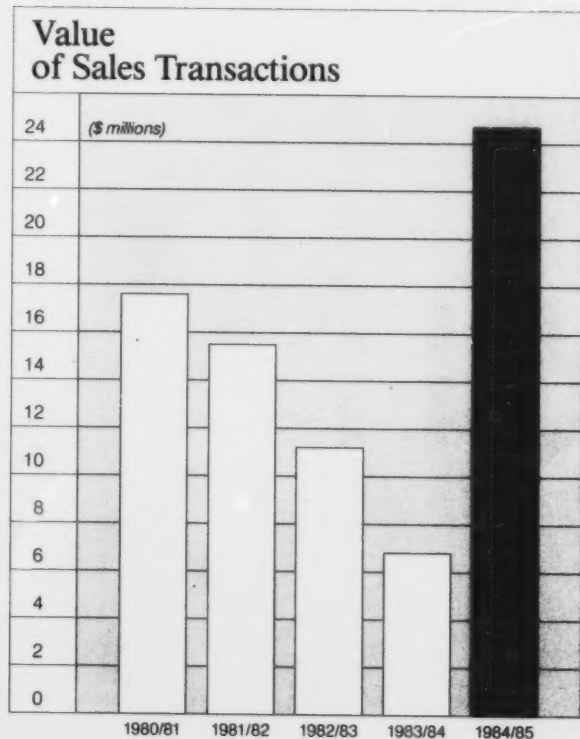

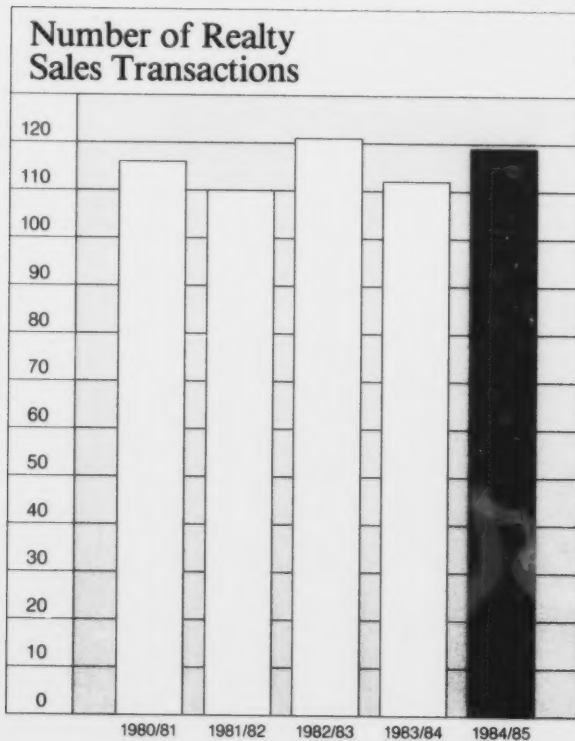

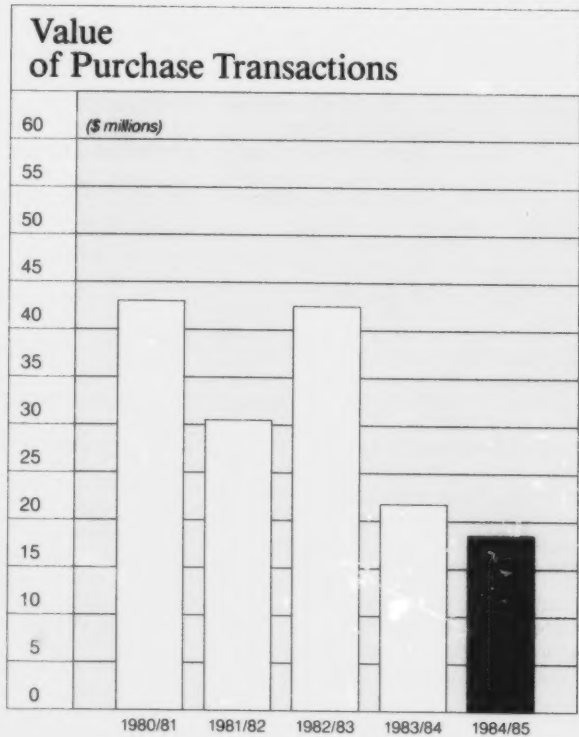

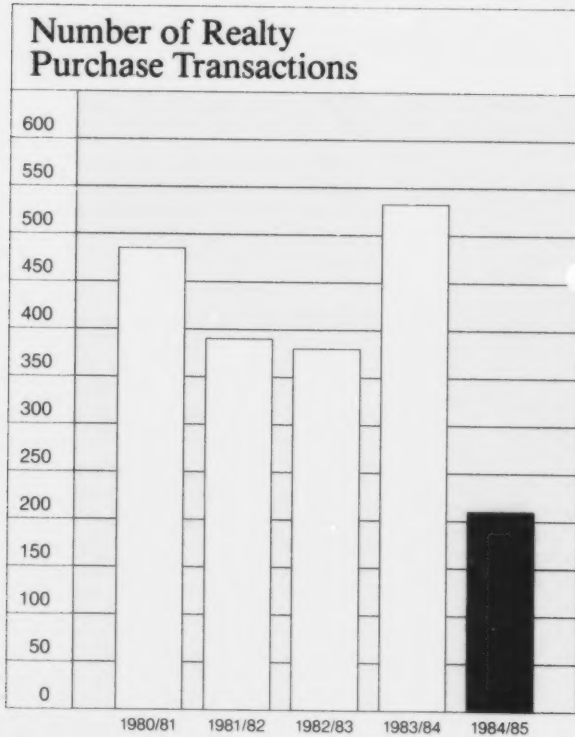

During the year the branch designed and prepared contract documents for about 270 projects. It was involved in 350 advisory projects ranging from major feasibility studies to advice on selection of furniture. And technical experts put on training seminars for field office staff covering fire safety, building codes, specifications, commissioning of architects and other topics.

Following the passage of the new Architects and Professional Engineers Act in August 1984, the branch made several presentations interpreting its implications with regard to increased involvement of professionals in management, staff, the Interministerial Accommodation Committee and many ministry clients.

In anticipation of higher air-quality requirements, the branch developed new standards for increased ventilation in new buildings. In energy conservation efforts, it developed a new building design utilizing the building mass as thermal storage, reviewed new roofing systems, and tested new energy-efficient light sources, control devices, security and safety devices, structural materials, pre-engineered buildings and pre-engineered masonry.

A new direction in office design was set reflecting the rapid growth of office automation, the need for flexibility, and the increasing awareness of the importance of the working environment to efficiency of the workforce. Major examples of this trend are new facilities for the Ministry of Municipal Affairs and Housing at College Park in Toronto and the Ontario Health Insurance Plan in Kingston. Both make extensive use of adaptable component furniture and screen systems with fully integrated electrical services and ergonomic seating.

Branch staff also served on the Art Advisory Committee, which commissioned works of art for the Ottawa courthouse and registry office. Previously commissioned art was installed at the St. Catharines courthouse and registry office and the Macdonald-Cartier Building in Kingston.

Realty Services Branch

The Realty Services Branch is responsible for buying, selling and managing real estate on behalf of the government of Ontario. It also takes a lead role in developing government policies in this field and provides advisory services to ministries, boards, commissions and crown agencies on real estate matters. Activities performed in this role include appraisals, negotiations, expropriations, land and building purchases, title searching, property surveys, land management, letting of currently unneeded property and disposal of surplus property.

During 1984-85 the branch launched an aggressive sales drive known as the Accelerated Land Disposal Program. This was the result of the 1984 provincial budget which called for an additional \$25 million in revenue from sale of properties in various urban centres. By year-end the branch had realized sales valued at more than \$20 million under this program, and achieved a total revenue of \$32 million.

This program also represented the first step in development of a broad new land management strategy covering the province's substantial real estate holdings.

Called the Land Management Program, it was designed to pursue optimum use of, and highest possible investment returns from, all government properties. The branch engaged a consulting firm to help develop a control system for carrying this project forward.

During the year a total of 187 properties were acquired for the ministries of the Environment, Natural Resources, Agriculture and Food, Municipal Affairs and Housing, Treasury and Economics, the Solicitor General, Transportation and Communications, as well as Ontario Hydro. In the same period 122 properties were sold for a total of \$24.7 million. The 2,248 properties under interim management provided a rental income of some \$6.1 million from 1,710 leases.

The branch also administers the Home-Owner Employee Relocation Plan, which assists government staff being transferred from one locality to another as a result of organizational changes. In the year under review this plan helped 491 employees to relocate at a total cost of \$3.5 million.

Leasing Services Section

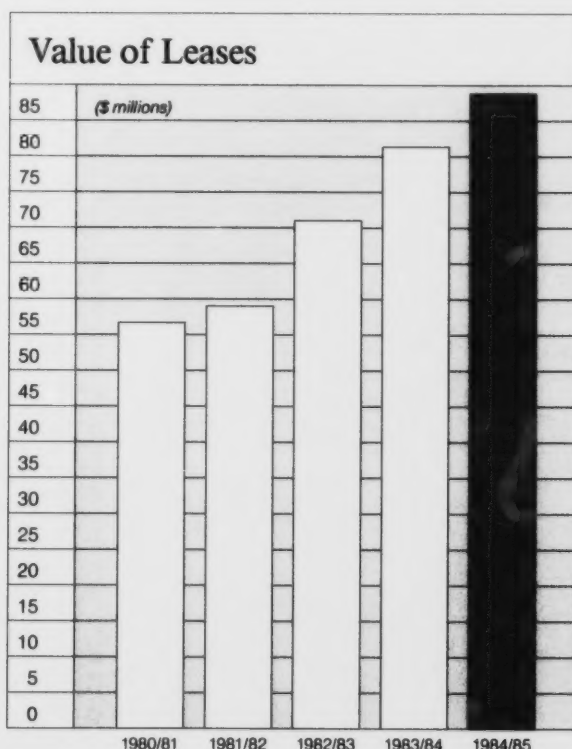

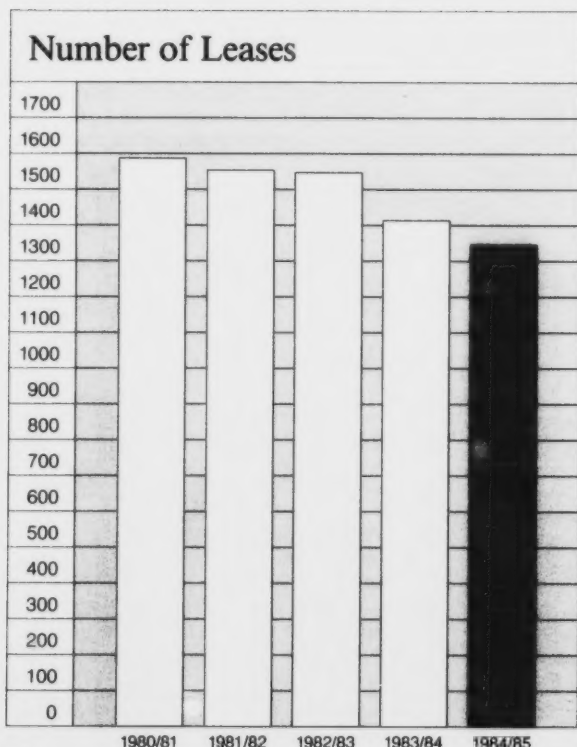

Leasing Services is totally responsible for the provision of accommodation in privately owned buildings for provincial ministries, agencies and commissions. Inventory in 1984-85 consisted of 1,380 leases, for a total annual rental of \$88.9 million.

The leasing function involves a site search, negotiation of the terms and conditions of a lease agreement, including tenant improvements and overall project co-ordination, the execution of the lease document and client occupancy.

Leasing Services is also responsible for the payment of rent and any additional costs, as well as responding to any problems pertaining to the landlord or the tenant. It also administers 20 lease-purchase agreements, with an annual cost of \$7.7 million.

Leasing Services provides a variety of advisory services such as market analyses and feasibility studies, and acts as a consultant on any leasing matters for provincial agencies not covered under the accommodation umbrella of the province.

The group maintains constant awareness of the fast changing technology in this facet of the real estate market.

Property Management Division

The division concentrated this year on improving delivery of accommodation services, upgrading the condition of government buildings and raising the accountability and productivity of division personnel.

A survey process was established to determine unique client needs and help gauge the effectiveness of service delivery. A service highlight was improvement of access to government buildings by the handicapped through 18 projects costing a total of \$288,600.

The division increased repair activities designed to maintain the province's \$5 billion investment in physical plant. It took a leadership role in preparing for the retrofitting of government buildings to meet requirements of the new Ontario Fire Code.

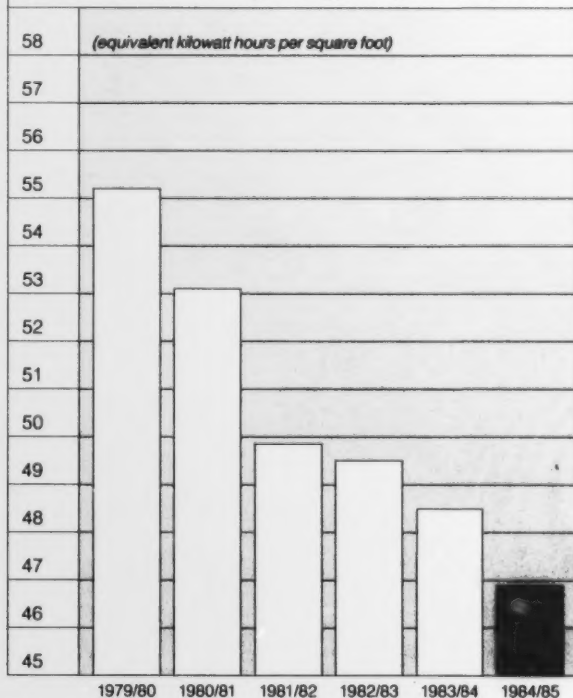

The division continued consultations with the Ministry of Energy to investigate the feasibility of establishing a private sector financing mechanism for retrofitting buildings. Within government buildings, an increase of less than 1.0 per cent was experienced in energy consumption over the previous fiscal year. This was due in part to the need to make improvements in air quality through the increased operation of ventilating systems. Despite this, a cost avoidance of \$16.5 million was realized due to continued emphasis on energy management through energy savings initiatives. More than 200 retrofit projects were completed under this program which involves retrofitting, overhauling building operation procedures, and monitoring energy use.

To improve accountability and productivity of staff, the division emphasized Management By Results – a system of measuring staff performance and client satisfaction. It also developed employee skills through the human resources plan, which embraces staff training and development, career management, performance evaluation, staff development planning and forecasting, succession planning and a transition program for redundant employees.

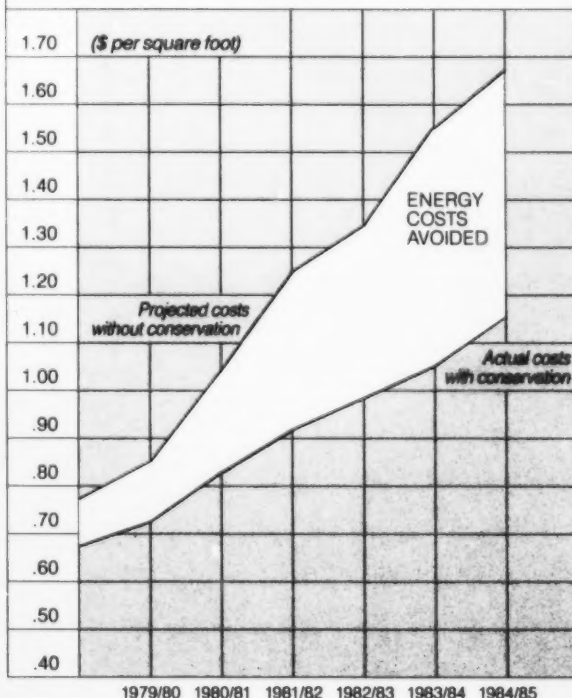

Strategic and operational planning was extended to include district managers, while at the same time, internal communication was enhanced through the installation of facsimile terminals in each district office. Work started on linking district data bases into a network for more efficient information exchanges.

Computer and Telecommunication Services Division

This division provides information technology services and products to ministries, agencies, boards and commissions of the government of Ontario. It operates three major computer centres with 5,200 terminals, handling an estimated 80 per cent of the government's computing. It runs the government telephone system, data transmission facilities, audio and video teleconferencing, and educational programs to train people in new information technologies.

Computer usage and service grew substantially during the year. There was a 25 per cent increase in the number of terminals on the system. Client work volume on the computer rose by eight per cent, but internal productivity improvements, including consolidated billing, resulted in only a four per cent cost increase to clients. As well, the Kingston Regional Computing Centre mainframe was upgraded to provide 20 per cent more processing power.

Major computer-based initiatives implemented by clients during the year included an on-line assessment system for Revenue, land registry systems for Consumer and Commercial Relations, and an income maintenance system for Community and Social Services. For the Health ministry, an on-line claims correction system was developed, while Transportation and Communications' vehicle registration system was enhanced. Undergoing development at Government Services is the human resources system known as CHRIS.

On the software side, several computer-based products such as IFPS, SAS, Pac II Interactive and FOCUS were enhanced to improve their functionality.

A significant number of clients have been assisted in the past year in undertaking feasibility studies of their computing needs, evaluating performance of existing systems, and in acquiring software and hardware; for example, Management Board's personal computing facilities, a mapping system for the Ontario Geological Survey, and a feasibility study for the Ministry of Labour, Office of Arbitration.

Telecommunications activity also expanded, especially in the field of teleconferencing. The number of multi-location audio teleconferences grew by 57 per cent to an average of 70 per month, while video teleconferencing grew 144 per cent to a 5.1 monthly average.

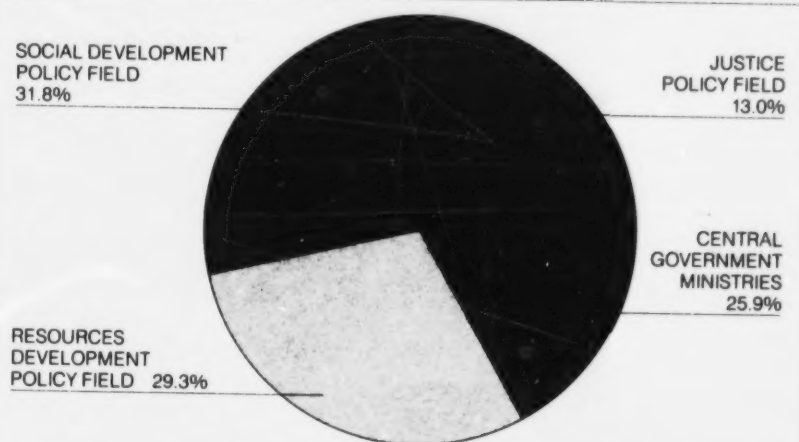

Approval was received for two major telecommunications projects which are now being implemented. One combines the ministry's Metro serving plan and the Bell Canada-supplied Centrex III system to greatly improve telephone service to government offices in Metropolitan Toronto. Computer-based digital equipment will provide faster, smoother switching and a wider range of telephone functions at no increase in costs to clients and a long-term saving to the government. The other is the "Roadrunner" Switch, a computer device to expand and streamline the government's inter-city telephone network

which handles 35,000 long-distance calls a day. The potential saving from installation of this switch is estimated to be \$10 million over 10 years.

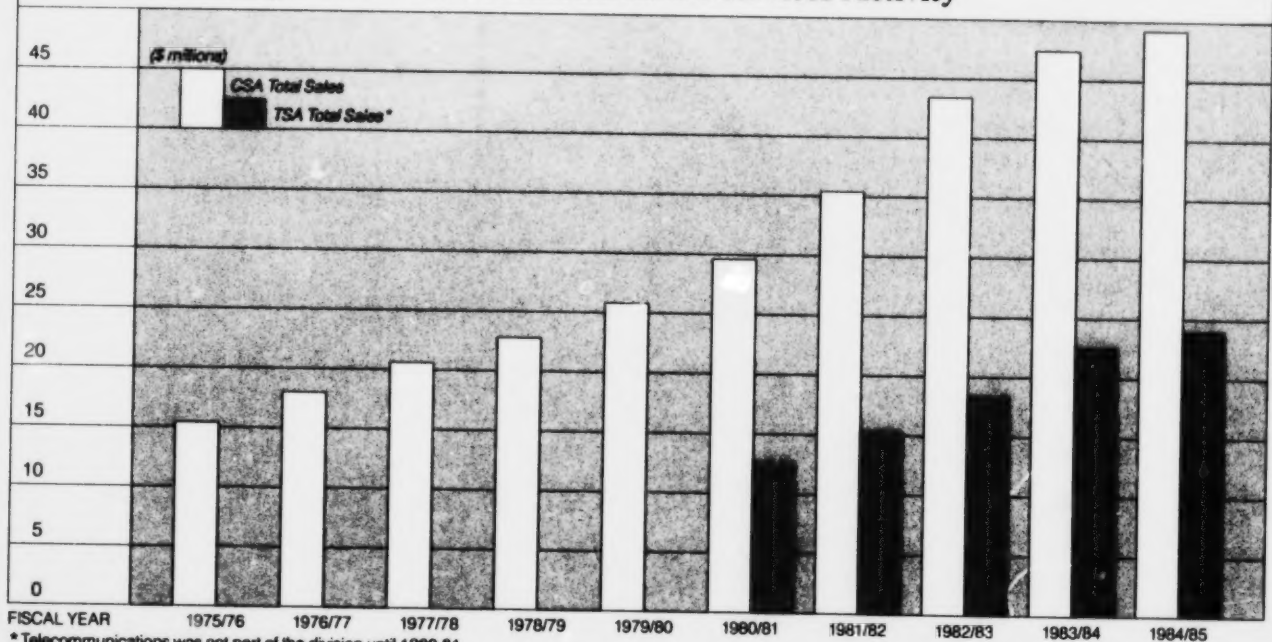

The division also helped in the tendering and installation of 35 local telephone systems for client ministries. Altogether, there are now 50,000 telephones in the government system.

For the coming year the division looks forward to significant planning activities in cooperation with its clients, as it prepares new foundations for information technology for the balance of the decade.

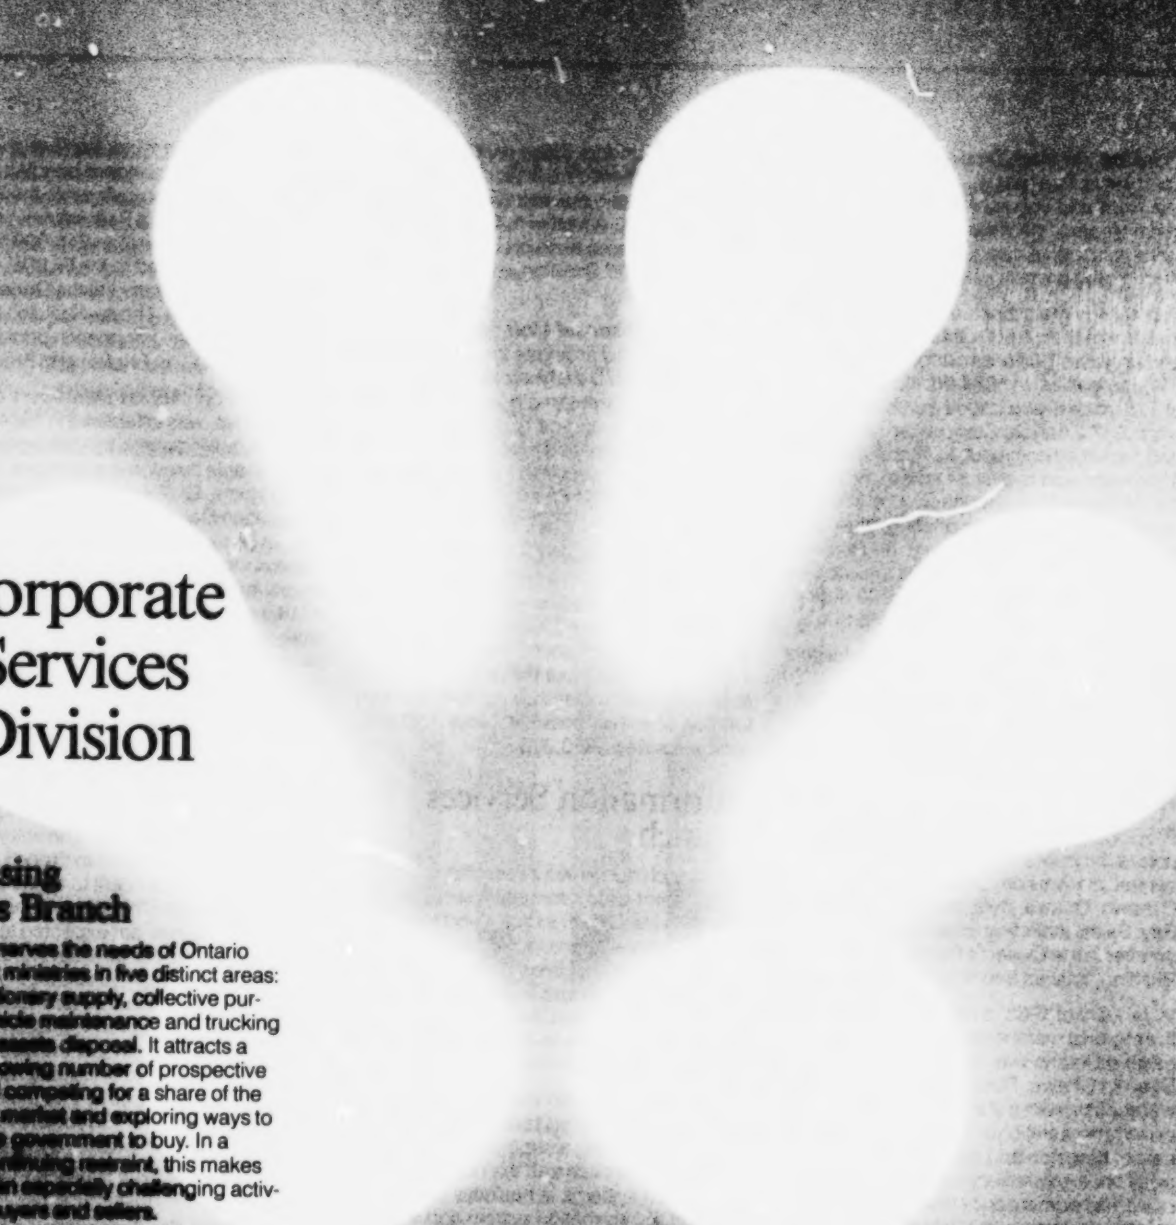

Income by Policy Field Total income \$73,755,200

Growth in Computer and Telecommunication Services Activity

* Telecommunications was not part of the division until 1980-81

Corporate Services Division

Purchasing Services Branch

The branch serves the needs of Ontario government ministries in five distinct areas: printing, stationery supply, collective purchasing, vehicle maintenance and trucking service and assets disposal. It attracts a large and growing number of prospective suppliers, all competing for a share of the government market and exploring ways to persuade the government to buy. In a climate of continuing restraint, this makes purchasing an especially challenging activity for both buyers and sellers.

Printing Services Section provided a comprehensive graphic arts service to all ministries and agencies and assisted them in developing specifications, calling tenders, creative designing, and purchasing from the graphic arts industry.

This section maintained a detailed source list of more than 1,000 Ontario suppliers and provided business opportunities to 717 companies. In 1984-85, it called a total of 715 tenders and issued purchase orders worth \$17.3 million. Competitive tendering and expert advice resulted in cost avoidance estimated at over \$4 million. State-of-the-art technology was introduced in the production of legislative printing for expected savings and improved lead times. Printing Services also operates the copy centre, which produced over 2,000 duplicating jobs with sales totalling \$365,000.

The **Government Stationery Service** met the needs of 80 per cent of all Ontario government offices by stocking more than 1,000 items of stationery, office supplies, forms and giftware. In 1984-85 it supplied 34,000 items per month and achieved sales of \$8.7 million.

Provision of Ontario-made souvenir products to the public was extended to regional centres in Hamilton, London, Sarnia, Oshawa, Ottawa, Sudbury and Thunder Bay. Sales, including those at the souvenir counter in the Queen's Park Legislative Building, totalled \$40,900 for the year.

In January of 1985, a new facility extending the regional warehousing concept to eastern Ontario was opened at 10 Rideau Street in Ottawa. This full-service warehouse, with a staff of three, serves 350 government stationery customers located east of Kingston and north to Pembroke. In addition, a convenient mini-store meeting customer's emergency stationery requirements was opened in the Macdonald Block at Queen's Park in August, 1984.

The **Collective Purchasing Service**, which negotiates collective agreements with suppliers for common-use products and services, continued to capitalize on opportunities for supply efficiencies and economies of scale. This resulted in purchases by all ministries and agencies totalling \$45 million, yielding an estimated cost saving of \$9.6 million.

The section also continued to step up its efforts to meet representatives of the small business community across the province, to participate at trade shows and business fairs, and to develop constructive partnerships with the private sector.

The Public Tenders Office continued to provide a convenient central facility to ensure fair competition in the awarding of government contracts. A total of 1,448 tenders in various categories were processed, resulting in \$127.9 million in contract awards.

The **Assets Disposal Unit** receives, warehouses and arranges for reuse of furniture, equipment and materials declared surplus by ministries and agencies. During the year, a cash-and-carry public sales facility was established to sell surplus assets no longer required within government. Sales in 1984-85 totalled approximately \$200,000.

The **Vehicle Services Unit** continued to maintain and repair vehicles and equipment for all ministries on a cost-recovery basis. Sales in 1984-85 amounted to \$550,000. The unit also provided a trucking service throughout the province, achieving economies through consolidated loading wherever possible. Sales from this service totalled \$980,000.

Information Services Branch

The branch administers essential government-wide information services including the Queen's Park switchboard, language translations, publications, government mail delivery and records centres. Public access to the government is assisted through the Citizens' Inquiry Bureau in Toronto and the Access Ontario information centre in Ottawa.

The **Information Services Development** section carried out several major projects in 1984-85, including a submission in support of customer service and the public access information systems, a business case for the GUIDE information system and a first-year evaluation of Access Ontario. It also made improvements to Blue Page listings in public telephone directories, expanded government information to the public via Telidon and conducted a program review of the government's multilingual translation services.

Access Ontario, located in downtown Ottawa, completed its first full year of operation in December, 1984. In that period over 140,000 clients were served (96,000 in person and 44,000 by telephone), over 109,000 free publications were distributed, and over \$19,000 was collected from the sale of publications and Ontario souvenirs. The Ministry of Tourism and Recreation placed its local Travel Ontario booth in Access Ontario during the summer of 1984.

In the **Inquiry Services Section**, the Queen's Park switchboard handled in excess of five million calls while the Inquiry Bureau and Queen's Park information desks handled more than 216,000 inquiries. Terminals linked to the GUIDE database were installed at the Queen's Park switchboard. The section also revised and published the information booklet "Ontario Facts", in English and French.

A new section, **Access Databases and Directories**, was established in 1984 to improve public access by making information available through government information systems. GUIDE (Government Users Information Database in Electronic form) is the major information system for handling general inquiries from the public and for preparing directories and other lists. Three related public-access information systems were also updated and maintained, with on-line use by inquiry officers in the ministry. On-line access to all of the databases will be available to all ministries and agencies in 1985-86.

The **Translation Bureau** had another extremely busy year, aiding ministries to respond to the government's French-language services policy. The volume of translations from English to French increased by 15 per cent to a total of 4.7 million words. Changes planned for the 1985-86 fiscal year are expected to give more flexibility to this service. Translations from French to English increased by 65 per cent, largely as a result of submissions in French to a major government commission. The majority of multilingual translation continued to be documents helping newcomers to the province further their education or find employment. About 14,000 such documents in a wide variety of languages were translated into English for some 7,000 clients.

Publications Services achieved further improvements in its distribution of government publications through retail bookstore outlets, mail-order services and a province-wide library depository system. During 1984-85, 1.2 million priced publications were sold for \$2.58 million, with another 6 million distributed free of charge.

The **Government Mail Service** processed 101 million items during the year – an 11 per cent increase. By aggressively marketing its services and expertise, the section took advantage of Canada Post's discount rates on quantity mail and saved the government over \$1.5 million in mailing costs – a 20 per cent improvement over last year. The introduction of computerized processing equipment further improved the section's capabilities to handle large-volume mailouts.

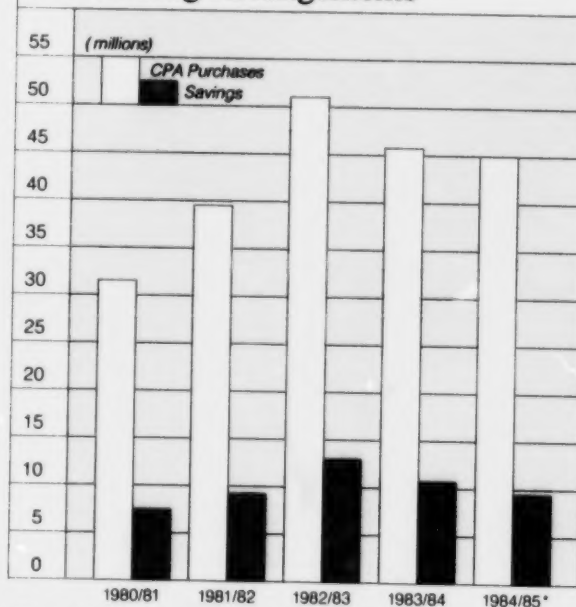

The **Records Centre Services** stored approximately 328,000 cubic feet of government records, including 37,000 cubic feet in private sector facilities. Additional government storage space has been identified for occupation in the fall of 1985. A joint ministry and Management Board of Cabinet study of the government-wide records management program was completed. It is anticipated that the resulting policy will provide direction for corporate records management throughout the next decade.

General Services Branch

The branch provides a number of support services to government programs at cost and quality levels superior to alternative sources of supply.

The **Government Payments Section** administered and recorded payments from the Consolidated Revenue Fund. During 1984-85, some 8.7 million payments were made using paper cheques, while electronic transfer was used for about 1.5 million payments.

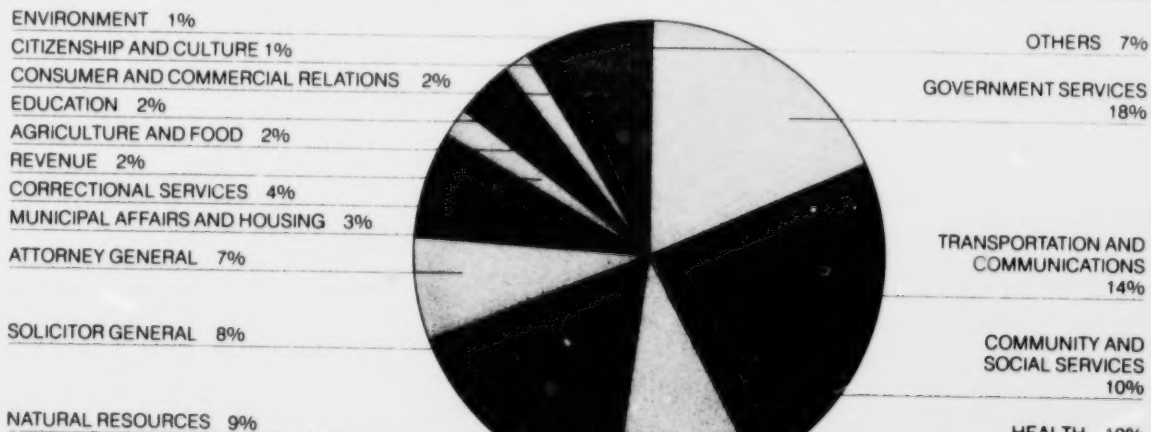

Value of Collective Purchasing Arrangements

*The reduction in purchases and savings in 1984-85 resulted from the withdrawal of microcomputers from collective purchasing arrangements.

Percentage Value of Collective Purchasing Arrangement Transactions by Ministries and Agencies

Total value of purchases \$45,000,000

The **Insurance and Risk Management Unit** administered insurance and risk management programs, bought insurance for the government and provided ministries and agencies with expertise to develop controls over risk exposure and loss prevention. During the year, it continued to use tendering procedures to obtain government-wide coverage allowing premium savings in general liability and automobile fleet insurance. New policies were negotiated covering individual ministry programs, and further studies were initiated to determine whether existing policies could be cancelled in accordance with government's policy to self-insure against risks to physical assets.

Official Documents prepared 14,927 formal documents issued under the Great Seal of Ontario and the Privy Seal of the Lieutenant Governor, and recorded and microfilmed 47,650 documents. It also prepared 13,562 congratulatory scrolls for presentation to Ontario residents in recognition of their 90th or succeeding birthdays, 50th or succeeding wedding anniversaries, significant individual accomplishments and special jubilees.

Central Collection Services provided assistance to client ministries in the collection of overdue accounts. During 1984-85, systems and organizational investments raised the collections made to \$6.3 million from \$4.1 million in 1983-84.

The **Food Services Section** arranged for tendering and administered catering contracts for cafeterias and vending machines in provincial courthouses and office buildings. It continued to develop new contracts designed to give caterers more freedom in menu selection and methods of operation. Caterers were selected by committees including ministry staff working in the buildings where contracts were planned.

Actuarial Services

This activity provided consulting services to ministries and agencies related to the design, costing and administration of pension and other employee benefit programs within the Ontario public sector. Services include pension actuarial reports, demographic studies, pension value calculations, investment yield projections, advice on pension and tax legislation and studies of experience under life, health and dental plans.

Special projects for the year included studies related to the costing, implementation and administration of supplementary pension plans for the Ontario Provincial Police and for deputy ministers. Also analyzed were cost effects of pension reform to the Public Service and teachers' pension plans, Charter of Rights issues regarding the role of age, sex and marital status under present legislation, and crop insurance coverage for the Ministry of Agriculture and Food.

Human Resource Services Division

Corporate Human Resource Information System

Development of the Corporate Human Resource Information System, called CHRIS for short, began in 1984-85 and ranks as a priority project within the ministry at the present time. A new contract in personnel and payroll management, it will be extended to all provincial ministries and agencies, providing a single, integrated source of information on the human resources of the Ontario Public Service.

A project director and core project team were appointed in November, 1984. Further resources are being drawn from other branches of the ministry, the Civil Service Commission and other departments as required.

The project is expected to be completed by the end of 1986. It will provide a single, integrated source of information on the human resources of the Ontario Public Service.

Employee Benefits and Data Services Branch

The branch runs the benefits program for more than 100,000 current and retired employees of the government, as well as current and retired members of the Legislative Assembly. It provides all ministries and some agencies with centralized payroll, benefits and attendance administration, and produces annual individual benefits statements to employees.

A new benefits plan for provincial judges was implemented July 1, 1984 and a new supplementary pension plan for members of the Ontario Provincial Police took effect January 1, 1985. Also effective January 1 were amendments to the Public Service Superannuation Act to permit regular, part-time and seasonal employees to become contributors, and related policy changes to provide these employees with group insurance and other benefits.

The **Finance and Administration Section** continued to provide support services related to pension plans, benefits and associated cost distribution.

Benefits Services administered benefits for current and retired employees and participated in pre-retirement seminars in cooperation with the Civil Service Commission and employing ministries and agencies.

Policy and Executive Benefits provided counselling and advisory services to client ministries, members of the Executive Compensation Plan, and contributors and pensioners under the Public Service Superannuation Act and the Legislative Assembly Retirement Allowances Act. Secretarial services were provided to the Public Service Superannuation Board.

Data Services operated and maintained the corporate integrated payroll, personnel and employee benefits system, central attendance recording system, Go-Temporary and pension payroll.

The branch continued to streamline internal operations and plan for future client needs through service improvements and corporate systems technology. It was heavily involved in the CHRIS project.

Employee Advisory Services Branch

This branch provides services in safety, health, counselling and rehabilitation to employees of all ministries.

Safety was addressed on a regional basis by the **Safety Services Section**, working with safety officers located in Thunder Bay,

Sudbury, Guelph, Kingston and Toronto. Priorities included building fire safety inspections, development of building evacuation plans and instruction in safety-related subjects such as first aid, driver education and accident investigation. An area of increasing importance was the testing and monitoring of air quality in government buildings.

The **Employee Health Service**, through 11 government health centres, provided direct, confidential health-related assistance to individual employees; supervised programs under the Occupational Health and Safety Act; advised management on health-related matters affecting work performance, and ran health education programs. Greater emphasis was placed on prevention and education in this service which handled more than 47,000 visits during the year.

Employee Counselling Services extended confidential guidance to 3,939 government employees with personal problems adversely affecting work performance. Major services included confidential, voluntary counselling; an advisory service on day care, and training to help managers deal with employee work performance problems. The greatest emphasis during the year was on a rehabilitation program assisting employees with long-term illness or accident injuries to return to the work place. By year-end, all but two ministries were participating in this program and 1,656 civil servants had been assisted.

Personnel Services Branch

The branch is responsible for job evaluation, recruitment, special staffing programs, staff relations, occupational health and safety, benefits and records administration for the ministry.

During the year it reorganized to deliver more effective personnel services to ministry clients. A one-window generalist concept and a specialized staffing section were introduced.

The branch worked closely with line management on organizational and job design questions; ensured proper compensation through effective job evaluation; arranged recruitment and orientation of qualified staff; administered management-union employee relations and health and safety committees; provided benefits administration and advice to employees, and maintained accurate employee personnel records.

It also conducted management training seminars in staff relations, recruitment, organization/compensation and attendance improvement.

Human Resource Planning and Development Section

This section co-ordinates a wide range of support and consulting services to ministry management and employees. Human resource planning is integrated in the ministry's strategic and operational planning process and a computerized human resource information system facilitates the matching of organizational needs with individual skills and interests.

During the year a management advisory service and resource library, also open to all ministry employees, was established. A performance management process integrating individual performance planning, evaluation and development was introduced to all employees in a series of meetings. Performance evaluations were conducted with each employee.

Affirmative Action Section

This section helps female employees of the ministry set and reach career objectives. It provides career counselling, conducts seminars, produces articles for publication in ministry newsletters and sponsors activities of particular benefit to women.

Among 1984-85 highlights was achievement of the corporate goal of 30 per cent female representation in the administrative services category. Thirty-one women attained management positions while 108 (11 per cent of ministry women) participated in accelerated career development initiatives. A program was developed allowing women to take six-month secondments to become qualified for systems maintenance programmer positions. Seminars on time management, assertiveness and conducting meetings were held for women in head and regional offices. Thirteen women participated in a Building Owners and Managers Institute training program to qualify for positions in the property management field, while 252 women attended new technology courses.

Finance and Administrative Services Division

Finance and Office Services Branch

The branch provides treasury and comp-
trollership services to the Ministry, Office of
the Lieutenant Governor, Ontario Women's
Directorate, Legislative Assembly and
Office of the Ombudsman. It also is respon-
sible for financial issues with Management
Board of Council, the Financial Services
and other related issues.

Communications and Customer Service Branch

Audit Branch

The branch performs objective assessments of the financial and management controls applying to ministry programs. This year it examined the ways in which these internal control systems are reviewed. Changes to the ministry audit plan will enhance the value-for-money component of internal audit.

In addition, a ministry audit committee was formed. Its composition is unique in the Ontario public service in that the committee includes an executive from another ministry and the private sector.

Legal Branch

Services provided by this branch include completing real estate transactions, drafting computer and other types of contracts, advising on legal matters and pursuing debts owed the Crown through court action. During the year 385 purchase, sale, lease and easement transactions were closed and 357 debt claims were received for collection litigation.

Analysis and Planning Section

This section co-ordinates the ministry's management planning process. It is responsible for liaison with and submissions to Management Board. It prepares ministerial reference material, develops administrative policy and provides a number of other corporate support services.

The section was given new responsibilities and an expanded workload, but productivity gains from a new automated office system allowed it to meet the demand with existing resources.

Systems Branch

The branch provides a full range of information technology services to the ministry and some other ministries and agencies. It supplies leadership in applying technology to ministry programs to improve their productivity and effectiveness. Other services include development and maintenance of computerized systems, microcomputer support, executive information, office automation and systems co-ordination.

Major initiatives undertaken during the year included the first phase of the Corporate Human Resource Information System (CHRIS) and the development of an information strategy for the ministry.

The branch is responsible for publicity through editorial services and media relations. It provides information on ministry policies and programs to the news media, ministry client groups and the public. It produces promotional publications and audio-visuals and co-ordinates ministry special events.

Editorial services in 1984-85 included the writing of news releases and speech texts. The branch's quarterly ministry newsletter late in the year became bi-monthly with a view to improving internal communications. Staff of the Media Studio, located in the Legislative Building, provided communications and photography services to members of the Legislature.

Twenty-four official ceremonies were co-ordinated by the branch during the year. Prominent among these was the ceremony "topping off" the \$50-million Ottawa courthouse and registry office building in December, 1984.

The format of the "Serving You" television series was expanded to include interviews with ministers as well as deputy ministers. The programs, providing information to the public on the workings of Ontario government ministries, were shown by 55 cable TV stations throughout the province.

Premier's medals for good citizenship, firefighters' bravery and police bravery were awarded at ceremonies co-ordinated by the branch. Ninety of the ministry's own employees saw their efforts recognized through the internal service-improvement suggestion program. A total of 734 suggestions were submitted for consideration.

The Ontario Collection, a comprehensive catalogue of the province's art acquisitions since 1905, was published with support from the Ontario Heritage Foundation. It met with positive critical acclaim and is on sale at bookstores throughout the province, including the Ontario Government Bookstore. The art inventory was computerized during the year to improve accessibility to the data. Ten works of art valued at \$90,000 were donated to the collection, whose current value is estimated at about \$10 million.

The branch also co-ordinates the government-wide customer service program, whose current focus is to provide easy public access to information and efficiently deliver information on request. An inter-ministry customer service committee shares information and ideas and explores ways to avoid duplication of effort in serving the public. This year it concentrated on raising awareness of the program throughout government, expanding the role of customer service co-ordinators in some ministries and developing the role in others.

An analysis of this ministry's own customer services was conducted during the year, focusing on two client ministries - Health, and Community and Social Services. Some 100 staff in both ministries were interviewed and the findings were turned into pilot projects with specific action plans.

Among other things the study made clear that in order to develop the partnership approach needed for service improvement, more face-to-face contact must occur between ministry staff and clients, from the earliest planning stages of a project through to its successful conclusion. Experience gained in the pilot projects will be applied in making adjustments to improve the ministry's customer services.
